

## Automated Role-Based Provisioning

It takes weeks to get a new employee setup and fully operational. The VP just hired a team of contractors that must be online by Monday. Your IT staff is spending half its time dealing with user provisioning issues.

Sound familiar? Avatier Account Creator™ solves these problems by centralizing user provisioning based on approved role definitions -- ensuring fast, efficient provisioning and compliance with regulatory security requirements. Utilizing provisioning templates that define all of the properties associated with a role, a delegated administrator can set up new users across multiple systems with just a few mouse clicks.

For completely automated provisioning, Account Creator's Human Resources Feed interface establishes user accounts as new employees are added to the corporate HR system. Since the HR system is considered an authoritative source, no further approvals are necessary. When an employee is hired, Account Creator detects the addition and associates the job title, position code, or any other HR field with a provisioning template, ensuring that the employee is ready to begin work before reaching his desk.

Like all modules included in the Avatier Identity Management Suite™ (AIMS), Account Creator deploys in hours without programming. Its integrated directory architecture requires no additional database or directory to install and manage. All configuration tasks are performed via a simple, web GUI.

Account Creator's Human Resources Feed interface automatically provisions new users when they are added to the corporate HR system.

### Integrated Identity Management

Avatier Account Creator integrates with Avatier Identity Enforcer™ and Avatier Account Terminator™ to automate all user provisioning and de-provisioning tasks. Once Account Creator has established a user's initial role(s), Identity Enforcer enables the user (or his manager) to customize his identity via self-service provisioning requests with dynamically generated approval work flow. Account Terminator automatically de-provisions users based on changes in the HR database or administrative action.

Account Creator also integrates with Password Station™, Avatier's market leading self-service password reset and synchronization solution. Newly provisioned users can be automatically enrolled, providing immediate cost savings and client service benefits.

### Strategic Benefits

#### Increase Business Efficiency

Free IT resources and increase provisioning accuracy with single solution for cross-platform provisioning. HR-driven operation requires no administrator intervention. Point and click interface integrates with any HR system.

#### Enhance Information Access

Accelerate new employee productivity with Day 1 provisioning of critical application access.

#### Facilitate Security Compliance

Assign approved roles to ensure privileges are granted per corporate policies and external regulations such as SOX, GLB, HIPAA, etc. Comprehensive logging, alerting and reporting (scheduled and upon request) provide required audit trails.

#### Lower TCO

Utilize existing directories and deploy without programming for industry's lowest implementation and operating costs.

### Key Features

#### Cross-Platform Integration

Utilizes core AIMS services and connectors to provide out-of-the-box provisioning of more than 30 common operating systems, directories, databases, applications, as well as any in-house custom application, without scripting or development.

#### Role-Based Provisioning Model

Accounts are created based on approved role templates that define privileges and naming conventions. Templates are administrator defined or discovered from existing user roles using Account Creator's clone user feature.

#### HR-Driven Operation

Integrates with any database to automatically execute provisioning operations based on updates to employee records. Pre-configured modules are available for leading commercial HR systems.

**Home Directory, Home Share, and Mailbox Management**  
Provides administrator control of directory and mailbox properties.

#### Comprehensive Logging and Reporting

All transactions are logged to provide a complete audit trail. Real-time and scheduled reports are available to support operations, management and auditing.

#### Web-based User Interface

All tasks are performed via an easy-to-navigate web User Interface. No programming is required. Consistent data, and saving administrative resources.

# Platforms Supported

Password synchronization, real-time account status, account termination, and employee provisioning are natively supported on the following platforms

Platforms	Supported Versions
<b>Operating Systems</b>	
 Microsoft Windows NT/AD	4.0, 2000, 2003
 Microsoft Windows Server	4.0, 2000, XP, 2003
 Sun Solaris	2.6 and above
 HP/UX	11 and above
 IBM AIX	4.3 and above
 Redhat Linux	7.1 and above
 z/OS (IBM OS/390)	V2R8 and above
 iSeries (IBM AS/400)	V4R5 and above
 Digital VMS	7.3-1 and above
 Tru64	5.1 and above
<b>Directories</b>	
 RSA SecurID ACE/Server	5.2 and above
 Sun Java System Directory	4.2 and above
 Novell NDS	4.01 and above
 Novell eDirectory	8.6 and above
 Oracle Internet Directory	All Versions
 Microsoft ADAM	All Versions
 IBM Directory Server	5.2 and above
<b>Databases</b>	
 Microsoft SQL Server	7.0 and above
 Oracle	8.x and above
 Sybase	12.x and above
 IBM DB2/UDB	6.x, 7.x, and 8.1
 PostgreSQL	6.2 and above
 MySQL	5.x and above
<b>Applications</b>	
 IBM Lotus Notes	R4 and above
 Oracle E-Business Suite	8.x and above
 PeopleSoft	8.x and above
 SAP	4.5B and above
 Infinium HCM	all versions
 Agilysys LMS/MMS	all versions
 Aristocrat	all versions
 Infogenesis	all versions
 Bally Technologies CMS	all versions

## Avatier's Technology Partners

business partner

## Minimum Requirements

### Hardware

#### AIMS Administration Server:

- 400 MHz CPU speed or higher
- 256 MB RAM
- 100 MB for program files and auditing database
- Monitor capable of displaying 16-bit color or greater and a resolution of 1024 x 768 or higher

### Software

#### AIMS Administration Server:

- Microsoft XP Professional, Windows 2000 Server, Windows 2003 Server - Standard Edition. When managing either a Microsoft Windows NT or Active Directory domain, we recommend making the AIMS Administration Server a member in at least one of the managed domains.
- Not intended for Microsoft Windows 2003 - Web Edition or domain controllers
- Microsoft Internet Information Server (IIS) 5.0 or later
- Microsoft SQL Server (optional)
- Microsoft Data Access Control (MDAC) 2.8 or later
- Microsoft .NET Framework 1.1 extensions necessary

#### Primary User Directory Store:

- Microsoft Active Directory
- Microsoft Active Directory Application Mode (ADAM)
- Novell eDirectory
- Sun Java System Directory Server (Formerly Sun One Directory Server and iPlanet Directory Server)
- IBM Directory Server
- Oracle Internet Directory
- Any LDAP Server

#### Web Clients:

- Microsoft Internet Explorer 5.5 or later
- Firefox 1.0 and later
- Safari 1.0 or later

## Languages Supported

Arabic	Hungarian
Chinese (Simplified)	Italian
Chinese (Traditional)	Japanese
Czech	Korean
Dutch (Netherlands)	Polish
English	Portuguese (Brazil)
French	Portuguese
French (Canadian)	Russian
German	Slovak
Hindi	Spanish
