## Overview

### What you will learn

This comprehensive course teaches you to how to install, configure and use the Avatier Identity Management Suite (AIMS) of products to solve real world identity an access management challenges.

Through classroom lecture and hands-on lab exercises, participants gain the knowledge needed to master the successful planning, installation, configuration, deployment and maintenance of Avatier’s Password Management, User Provisioning, Compliance and Risk Analytics modules.

Upon completion of the course, participants are awarded a certificate for passing the Avatier Identity Management Suite Certification exam.

### Learn how to:

- Prepare your AIMS environment
- Install and license the AIMS software
- Configure and use Password Station and Password Bouncer
- Configure your environment for user on-boarding and off-boarding
- Quickly fill your IT Store with privileges and roles
- Configure dynamic workflows for access request approvals
- Drive user provisioning and off-boarding through an HR Feed
- Setup compliance and risk auditing
- Control access to the system
- Master the command line utilities included with AIMS
- Advanced troubleshooting

## Benefits

This program helps your organization reduce costs, improve security, enforce compliance, and streamline operational efficiency.

Session	Date	Format	Price	Duration	Language
1001	TBD	Instructor-led with labs	\$5,000 USD	5 Days	English
